ATTRIBUTION FOR GOOGLE MAPS & GOOGLE EARTH

If you are using images from Google Maps or Google Earth, you must provide attribution for both Google and the data provider (if there is a third-party data provider) the entire time the graphic is on screen.

Data providers are listed in the bottom right corner of Google maps. In this example, Google and Sanborn are the data providers.

Data providers are listed in the bottom center of the 3D Google Earth view. In this example, Bluesky is the provider. If you were to use this image as-is, the attribution on the map is sufficient. If you want to crop, zoom, or style the attribution differently, you would need to include both Google and Bluesky in the attribution. (Ex. Map data: Google, Bluesky)
Note: You cannot delete, blur, or add elements (like clouds, etc.) to a Google Map or Google Earth image. The images must look the same on television as they would online.

Please visit http://www.google.com/permissions/geoguidelines/attr-guide.html for further details about map attribution.
